TOPEKA, KANSAS, November 24, 1915.

We have just finished digging our Apple Seedlings and will begin grading at once.

We can ship out orders at any time now. Stocks will grade up even better than we expected. We will have a good supply of all grades.

We grow Apple Seedlings but do not grow Apple Trees to compete with our customers.

We have seedlings from both French Crab and Native seed. Unless otherwise specified we will furnish from the French Crab.

We can often save considerable freight by combining local shipments so as to get carload rates.

When shipments go in bulk in car lot we do not cut off the tops. When seedlings are boxed we cut tops back to within six inches of the collar on No. 1 and No. 2 straight grades unless instructed otherwise. We do not cut the tops off of the No. 3 or the No. 4 or the branched grades.

It is to your advantage to place orders now for both Apple Seedlings and Grafts, so that you may receive the exact grade and varieties wanted.

We pack thoroughly and guarantee seedlings to arrive at your station in perfect condition.

Our seedlings are all 1 year old—smooth, clean stocks—no aphis—no hairy root—no disease of any sort.

No charge for boxes or packing. We will gladly send samples of any of the grades.

Prices are subject to change without notice.

DESCRIPTION OF THE ABOVE GRADES.

No. 1, 3-16 and all up, straight (the very best grade for grafting), include all the $\frac{1}{4}$ inch grade. These No. 1 run 40 per cent or more $\frac{1}{4}$ inch.

Extra Select, $\frac{1}{4}$ inch and up, straight grade, is our top grade. Roots are as heavy as the 7-12 m. m. imported stocks. They are $\frac{1}{4}$ inch at the collar and as far down as seven inches below the collar, many of them run $\frac{1}{4}$ inch fourteen inches below the collar.

The $\frac{1}{4}$ inch and up, branched (7 to 12 m. m.), are especially fine, heavy stocks, well branched.

Medium grade, 3-16 to $\frac{1}{4}$ inch, straight. These are the same as No. 1, 3-16 and up, straight, except the $\frac{1}{4}$ inch roots are taken out.

No. 2 straight we grade 2 $\frac{1}{2}$ to 3 $\frac{1}{2}$ -16. They are better than common 2 to 3-16.

No. 2 branched include all 2 $\frac{1}{2}$ to 3 $\frac{1}{2}$ -16 branched roots. Good for budders where land is strong.

Special Grade, 3-16 and up. These are not quite long enough for No. 1 straight or quite branched enough for No. 1 branched, so they are put into a special grade. Several firms using them report that they are the best grade for Whole Root Grafts.

Grafter Grade. This is an irregular grade; often crooked collars—irregular roots—but always enough wood in the root to make at least one graft. These roots are healthy but not the proper form to go into any of the other grades.

No. 3 Grade. These are straight and include the 2-16. They are often used for grafting light cions.

No. 4 Grade. Under 2-16; small, for transplanting.

APPLE ROOT GRAFTS.

We are equipped to handle orders for Apple Root Grafts in any quantity.

In order to keep our experienced men employed during the winter we will take Root Graft orders at practically cost.

All piece root grafts are made with No. 1 straight root Apple Seedlings. We use a four-inch root and a six-inch cion, which we have found gives the best results. We will make any style of grafts to order.

Special discount when parties furnish their own cions.
